

Penguin Watch #1

Biologists observe animals and describe their behavior. This helps scientists understand how animals live: how they find food, protect themselves and interact with other animals and each other.

For this activity, choose one penguin and observe it carefully for five minutes. Most of the penguins have colored bracelets. This makes it easier for the Aquarium staff to identify them. Look for your penguin's bracelet. What color is it? Is it on the right or left wing? (Females have bands on their right wings, males on the left.) Use the bracelets to help you keep track of your penguin and watch its behavior closely. Make a simple sketch of your animal.

Name of your penguin:

Male or Female?
